### **BTECH Announces: Battery Asset Management Program**

BTECH announced a new Battery Asset Management Program that is designed to help new customers become proficient at utilizing vital battery data provided by their new BTECH Systems.

The predictive capability of BTECH Technology eliminates a major risk to your mission critical systems. BTECH Technology identifies batteries in their earliest stages of deterioration and then delivers vital early warning e-mail messages to give you the time to avoid sudden and catastrophic system crashes.

Options available to each new customer include real-time remote monitoring of UPS battery systems via dial up or network access, the option to e-mail specific data to BTECH for analysis and telephone help line are among several options.

Tom Leonard, BTECH President & CEO, stated "the new offer responds to end user support and orientation needs". "This new program sets BTECH apart from competitors especially in this economic climate where customers need the assurance they will receive a solid return on each capital dollar they invest"

There is no charge for the Battery Asset Management which runs for 90 days following system installation.

Questions about the program can be directed to Joseph Centurrino, by phone at 973-983-1120 or e-mail [jcenturrino@btechinc.com](mailto:jcenturrino@btechinc.com) .

#### **About BTECH Inc.**

**BTECH is widely recognized as technology and market leader in providing UPS Battery System Monitoring with over 5,000 installations worldwide. BTECH systems utilize unique patented technology to give early warning and identify faulty backup batteries that support mission critical applications. BTECH has offerings that serve a wide range of customer applications spanning local and federal government agencies, public utilities and business enterprises in most countries and on every continent.**
